# Wrapsody

Enterprise Content Platform

- Share only once, and have the latest version anytime, anywhere
- Apply file-level access control and audit trail
- Backup automatically without duplication and restore them instantly
- Use AI-powered document summarization, search, and Q&A features
- Visualize document usage and gain actionable business insights
- Minimize ROT data using AI and ML technologies

Productivity in the workplace is paramount to the success of any business. Cloud, mobile, and digital workplace initiatives evolved to address this challenge. Collaboration increases the difficulty of data security and management. The result is an overabundance of redundant, obsolete, and trivial (ROT) data with unknown or no business value, costly storage, and an expanded threat surface. Wrapsody provides customers with an intuitive enterprise collaboration solution that encompasses today's generation of data security and data management capabilities, reducing ROT data and the overall threat surface.

Wrapsody is a result of years of unparalleled expertise in data-centric security. It is designed to provide file-level content management, collaboration, and security for organizations without impacting productivity. With Wrapsody, we take a unique approach to information management: file-centric rather than message- or repository- centric.

Wrapsody

Wrapsody is an enterprise content platform for content management, collaboration, data governance and security. The solution uses content virtualization technology to manage and integrate all your documents, regardless of location.

Wrapsody helps you securely and efficiently share documents and save resources by eliminating ROT data using garbage content collection technology. By ensuring that content management functionality travels with files wherever they go, Wrapsody fills the gap between security and content management by complementing technologies such as enterprise content management, cloud storage, enterprise messaging, and enterprise social networks. Advanced Wrapsody also incorporates a sophisticated AI-powered feature that optimizes document search and information retrieval. This functionality effectively locates relevant documents, provides concise document summaries, and offers direct answers to user queries through a chatbot.

Wrapsody is a comprehensive solution for enterprise content management. It offers robust data governance, secure collaboration, and innovative AI capabilities to transform how organizations manage and interact with their information.

Auto Backup with Every Version

Backup automatically without duplication and restore them instantly. Minimize risks from ransomware.

Visualize Document Usage in Real Time

Collect document usage logs and provide analytics on their patterns. Analyze who used the document most and determine which templates are reused.

Boost Productivity with a Powerful AI Assistant

Use AI-powered document summarization, search, Q&A and many more.

Protect Digital Assets at All Times

Apply file-level access control and audit trail. Minimize risks of data breaches.

AI and ML Based Garbage Content Collection

Recommends potential ROT data to content owners and encourages them to eliminate it.

Innovative Collaboration

Sync the latest changes on local documents. Share comments with colleagues that are bound to documents.

About Fasoo

Fasoo provides unstructured data security and enterprise content platforms that enable our customers to protect, control, trace and analyze critical business information while enhancing productivity. Fasoo has successfully retained our leadership position in the unstructured data security market by deploying enterprise-wide solutions for more than 2,000 organizations globally, securing more than millions of users. Fasoo is experiencing continuous improvement in its global market position, based on our unique technology, ongoing R&D and strategic approach to comprehensive product capabilities by extending our core security capabilities into content-centric collaboration, behavioral analytics and information security consulting services.
