

Fasoo DSPM

NextGen Data Security Posture Management

- Discover sensitive, regulated, business-critical data residing in various repositories
- Continuously detect and identify all types of data – structured and unstructured
- Gain clear visibility of data across on-premises, cloud, and SaaS
- Identify classified data based on sensitivity levels and generate actionable insights
- Streamline compliance and security management with automated risk assessment and scoring

All Data, All Environment, All Risk

**Comprehensive
Data Visibility**

**Continuous
Risk Assessment**

**Streamlined Compliance
Management**

The widespread adoption of on-premises, multi-cloud, and hybrid infrastructures has led to data sprawl, where sensitive information, including PII, intellectual property, and business-critical data, is scattered across multiple environments. With the rise of dark and shadow data, it is increasingly difficult for organizations to identify, understand, monitor, and protect their critical assets. Without clear visibility and centralized control, organizations are left vulnerable to data breaches, compliance violations, and operational inefficiencies.

Fasoo DSPM

Fasoo DSPM (Data Security Posture Management) offers a proactive approach to these challenges by enabling organizations to gain complete visibility and control over their data. Through automated discovery, classification, and analysis, Fasoo DSPM identifies vulnerabilities across on-premises repositories and cloud environments like AWS, Azure and GCP. Its centralized monitoring and actionable insights allow organizations to safeguard their information assets, minimize exposure to threats, and build a strong and resilient data security posture.

With Fasoo DSPM, organizations can identify and eliminate ROT and dark data – unmanaged information that can increase vulnerability to security threats. This process reduces the attack surface, minimizes potential entry points for cyber threats, and streamlines data management. Fasoo DSPM also ensures that sensitive data is properly classified and protected, reducing the risk of unauthorized access and enhancing overall data security.

Beyond data discovery and classification, Fasoo DSPM simplifies compliance management by aligning organizational practices with regulatory standards. By providing actionable insights into the security status at both the repository and data levels, Fasoo DSPM enables organizations to effectively monitor and manage compliance requirements. Moreover, the solution allows organizations to establish detection policies tailored to specific compliance regulations, facilitating adherence to laws such as GDPR, HIPAA, PCI DSS, and more.

About Fasoo

Fasoo provides unstructured data security and enterprise content platforms that enable our customers to protect, control, trace and analyze critical business information while enhancing productivity. Fasoo has successfully retained our leadership position in the unstructured data security market by deploying enterprise-wide solutions for more than 2,000 organizations globally, securing more than millions of users. Fasoo is experiencing continuous improvement in its global market position, based on our unique technology, ongoing R&D and strategic approach to comprehensive product capabilities by extending our core security capabilities into content-centric collaboration, behavioral analytics and information security consulting services.
